I talk to Brenda and she mentioned the same thing, there is a lot of information in many of those topics that we can use, no need to rewrite or reinvent the wheel. And part of this is what I was thinking.

But next need to coordinate with ODEQ, check with Todd or Amy who is the ODEQ person assigned and coordinate.

Because they have met him, they may want to check with him (the pastor) if it is OK to list him as a contact, and he can share the package of information, or forward to us the name of interested persons for us to forward a copy of the package.

With the difficulties finding viable PRPs, remedial activities may take a long time. I envision a package should be in the hands of all the residents living on-site, and once those packages are available they could be kept for when other people call asking about this project and what's the status. That will give credit for all the work done by EPA and ODEQ, and at least we present the road forward and some recommendations of what they can do. (Again, following ATSDR, ODEQ and Ok Health Dept recommendations for people living on contaminated properties.)

Again, check with Todd or Amy. I didn't catch the name of the person they have for fact sheets. Run this idea, check what they think, coordinate and keep us informed. You may share this outline with them and see what they think.

Bart:

I think we should try to utilize the Pastor as a contact person. We could put together a packet for him concerning Superfund, The process, where we are and what's next. ATSDR puts out fact sheets on different metals, contaminants, etc. e.g. This fact sheet answers the most frequently asked health questions about Lead. (see attached)

This is something we could do very quickly, and could mail early next week. We already identified the contaminants of concern, so we could use the ATSDR fact sheets, The Superfund Snake, and a cover letter explaining that this information is a guideline and the further investigation will follow to determine the levels of contamination, and a thorough risk evaluation done to determine the best course of action to protect human health and the environment.

Thanks;

As follow up from yesterday call with ODEQ, it was discussed that an EPA/ODEQ fact sheet maybe appropriate.

With the recent concern from the Church pastor living onsite and the recently discovered seep in the creek (ODEQ & USFW). The pastor and the residents living onsite may ask what is this about, what are we doing and what they should do.

I put together a draft outline of what could be a fact sheet to summarize what is Superfund; what has been done; what are we doing; what would happen next; and space for EPA/ODEQ to present some general recommendations to those residents (ODEQ and their Health Department will have to help us there, these are just some ideas).

But before sharing this with ODEQ, I want to ask you if you have any other ideas or suggestions. What do you think?
